virtual_list

This template should help get you started developing with Vue 3 in Vite.

Recommended IDE Setup

[VSCode](#) + [Volar](#) (and disable Vetur).

Type Support for **.vue** Imports in TS

TypeScript cannot handle type information for **.vue** imports by default, so we replace the **tsc** CLI with **vue-tsc** for type checking. In editors, we need [Volar](#) to make the TypeScript language service aware of **.vue** types.

Customize configuration

See [Vite Configuration Reference](#).

Project Setup

```
npm install
```

Compile and Hot-Reload for Development

```
npm run dev
```

Type-Check, Compile and Minify for Production

```
npm run build
```
